

Operations first. The products come out of the shop floor.

I set out to build a product and found the real problem was the factory behind it: how one person builds, tests, ships and adapts software without a development team.

So I built the shop floor first: the guardrails that keep it safe, the governance that keeps it honest, and the process flexibility that lets a business person run real software projects at near-zero cost. AI agents do the building. I set the direction, make the decisions and check the work. Five tools and learning sites are publicly viewable. None has launched; all are in alpha or early beta. The concepts and internal work below show where the next push could go.

Featured concept · In design · Not built as a product yet

A guided toolkit for starting your own fractional, consulting or side-gig business

[working name: none yet]

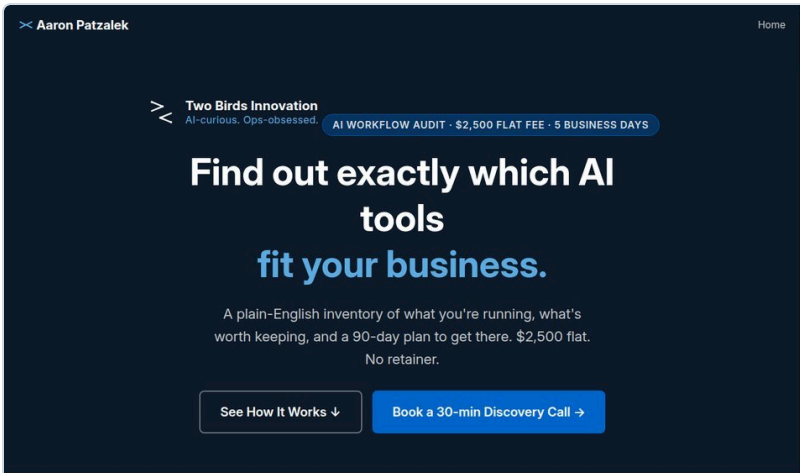

A Wix-style guided builder for new independent businesses in Southwestern Ontario. Say what you want to build: a consultancy, store, product or fractional role, plus your reach and goals. The guide would walk you through:

- 01 **Direction:** a business plan and a practical roadmap.
- 02 **Structure:** sole proprietorship, corporation or partnership, with plain-language risks and rewards.
- 03 **Registration:** registering the business and sales tax (HST) basics, pointing to official sources.
- 04 **Checkpoints:** insurance, legal considerations and certifications to consider, with official sources and professional advice where needed.
- 05 **Practical setup:** calendar and booking, business email, a simple website, and an offer and price page.
- 06 **AI help at each step:** using the person's own AI models.

For: new fractional and side-gig workers, students starting a business, and municipal and community economic-development teams offering a tool to local entrepreneurs.

Potential: promising to test locally; the guided product remains a concept.

* Open backlog items: about 48 (rough count, Consulting/site).

First example built with the approach: an [operations audit](#), [\\$2,500 flat fee](#). Aaron's own practice is the first working example.

The setup checklist the guide would support

- Calendar
- Business email
- Offer and price page
- Booking

AN AI OPERATING SYSTEM FOR SOLOPRENEURS [THE HAL STACK]

7,077

commits across 15 repositories,
counted 8 October 2026

Guardrails

Automated checks block unsafe or unverified changes before they ship.

Governance

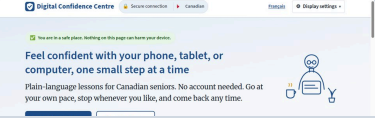

Written rules and recorded decisions for significant choices.

Public-address testing

Products are checked on their public addresses before a sprint counts as done.

Working products (alpha, not launched)

Alpha · Not launched · No usage claims

Alpha · Free

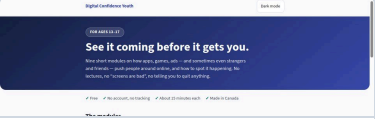

A free digital-skills learning site for seniors

[Digital Confidence Centre]

Plain-language Canadian lessons on safer, more confident technology use. Learn at your own pace, with scam practice, online banking, passwords, video calls and AI literacy. No account needed.

* Open backlog items: about 113 (rough count, shared adults + youth theme).

[Explore the lessons ↗](#)

Alpha · Free

Free digital-confidence learning for kids and teens

[Digital Confidence Centre, youth]

Nine short modules for ages 13 to 17 cover feeds, games, online pressure, misinformation and AI. Teen and parent courses include certificate checks. Younger kids have caregiver-led activities on privacy, kindness and critical thinking.

* Open backlog items: about 113 (rough count, shared adults + youth theme).

[Teens ↗](#) · [Kids ↗](#)

Alpha · Free

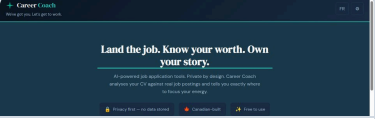

A small-business operations check-up

[Clarity]

Answer six questions about how your Canadian business runs. Get strengths, weaknesses, opportunities and threats, recommendations rated by effort and payback, quick wins and an industry benchmark. No sign-up.

* Open backlog items: about 40 (rough count).

[Try the check-up ↗](#)

Alpha tool · Extension is an idea

Career coach with automated job search

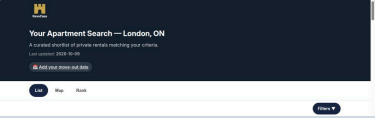

[Career Coach]

The alpha tool compares a CV with a real job posting and shows where to focus. Privacy by design: saved data stays in the browser; analysis sends selected content to your chosen AI provider.

Roadmap ideas, not started: a more capable AI agent for job search and discovery; a more detailed intake questionnaire personalized to where the person is today; possibly a video resume later.

* Open backlog items: about 61 (rough count, combined career theme).

[Explore the career tool ↗](#)

Alpha · Early stage

A ranked apartment-search shortlist

[KevsCasa]

For renters in London, Ontario. Curated private rentals with list, map and ranking views, a plain explanation of scoring, search criteria and call tracking. Availability needs checking directly with landlords.

* Open backlog items: about 18 (rough count).

[Explore the rental shortlist ↗](#)

Not yet public as products

Built internally, or clearly marked as ideas

Potential ratings are Aaron's own judgement, not market proof. No confirmed paying customers are claimed for any item here.

Internal system · Productization idea

An AI operating system for solopreneurs

[the HAL Stack]

The shop floor works internally; its evidence page is public. A productized version is an idea, not built: a customized, sovereign, local image for each person, running their own operations on their own machine.

Like a personal assistant, it would receive only the permissions the person is comfortable granting.

Potential: moderate to high; test the fit before a product build.

* Open backlog items: about 61 (rough count).

Built · Not public

A business benchmark and roadmap report

[NormeScore]

Businesses, especially regulated professionals, measure where they are and where they could be. They receive a customized white-paper-style report on their gaps and a roadmap.

It can be white-labelled as a funnel for other businesses in any vertical.

Potential: worth testing a focused first release.

* Open backlog items: work mostly built, see note. Title matching missed this work; a zero keyword count does not mean no work remains.

Internal tool · Working today

An idea-capture system

[Magpie Scribe]

Forward a video, voice note or link and it is transcribed, scored and filed into a searchable vault. About 800 items captured. Includes the local transcription workflow [The Perch].

Potential: moderate. Internal tool today; it needs to hold up for someone else before becoming a product.

* Open backlog items: about 8 (rough count, shared capture theme).

Idea · Not built as a product

An AI-guided website framework

[working name: none yet]

An AI-guided framework for independent businesses to build and run their own website using their own AI models.

It grew out of building small-business sites with the operating system. The framework is an idea, not built as a product.

Potential: useful to test alongside the guided business toolkit.

* Open backlog items: see Consulting/site total of about 48 (shared rough count).

Aaron Patzalek · Freelance Product Development and Operations Lead · 15+ years in retail, eCommerce and telecom operations · Southwestern Ontario.
Counts are a rough keyword match on open items in the working backlog as of 9 October 2026, not defined sprints. Shared theme counts are not additive.
Status as of 9 October 2026. Screenshots show the publicly viewable alpha pages; proposed extensions are identified as ideas.
